Project: Autonomous Parking

General Description

Control software for an autonomous parking system

- **test-driven development** in Java using jUnit,
- **integration testing** using Mockito,

Detailed description on Blackboard, the **Software Testing Project** section.

Project: Autonomous Parking Assist

General Description: Phase I

TDD of the autonomous parking module with the following interfaces:

- Receiving and filtering ultrasound sensor data,
- Detecting free spaces while moving along a street,
- Park and Unpark.

Test design, TDD, jUnit

Project: Parking Assist

Schedule and Deadlines

- Forming groups of 3/4: **September 7** end-of-day, **self enroll on Blackboard**
- Phase 1: TDD of a Unit: **September 18**
- Phase 2: Integration Testing (Mocking): **October 2**

Project examinations: starting **October 5**. These are face to face meetings with the whole group, questions **about the project** and the **testing lectures contents** will be asked.

Project: Parking Assist

Schedule and Deadlines

By the deadline:

- **Deliverable** to be submitted on Blackboard

During the project:

- Two hour supervised session for the whole class, by Wojciech, **check your schedule and BB announcements.**
- There are two slots in the schedule, let's divide them:
 - **first** slot during the week: **odd** project group numbers
 - **second** slot: **even** project group numbers
